Viranorm Capsules

The 250 asymptomatic and mildly symptomatic COVID patients were divided into two groups. One group received standard medical care and the other group received Viranorm with standard medical care.

COVID patients who received Viranorm along with standard medical care..

- Recovered faster, without any complications.
- Did not move from mild to severe COVID conditions.
- Experienced better and faster recovery from cough and breathlessness associated with COVID,
- Did not experience any side/adverse reactions.
- COVID patients with Diabetes and High Blood Pressure recovered faster without any complications.

Clinical trial results show that Viranorm helps asymptomatic & mildly symptomatic COVID patients to recover faster.

Viranorm worked better in the patients below 40 years and above 60 years of age.

Viranorm is an **AYUSH** approved ayurvedic medicine to improve our body's own natural ability to prevent or protect against diseases. Viranorm has completed one of the country's largest multicentric, randomized clinical trials for an ayurvedic product on 250 COVID patients. This was conducted at leading NABH approved hospitals including Victoria Hospitals in Bangalore. It was on par with any pharmaceutical trial.

This recently completed clinical trial on COVID patients was registered with the Clinical Trials Registry – India (CTRI) which followed all the norms mentioned by AYUSH and CTRI.

Reducing inflammation at the cell level & Improving cellular immunity (low NLR) is the major finding in this trial. No other Ayurvedic product in the country has clinically proved this fact.

The Khoday group has developed Viranorm in collaboration with Althea (DRF) Lifesciences.

Viranorm is made with commonly available medicinal herbs by using a specialized technique known as **Molecular Extraction**. Through this technique the specific component of an herb responsible for treating a specific health condition is extracted. This makes Viranorm perform better and the medicine reaches body in required strengths.

Trial data proves that cell level immunity (Cellular Immunity) improves and inflammation at the cell level is reduced with Viranorm.

Researchers & scientific studies from around the world have confirmed that cell level immunity (Cellular Immunity) is very important to fight or prevent any infection or disease effectively. Cellular immunity does not involve antibodies. At the same time, reduction in the inflammation at the cell level is very important for long term recovery from illness.

Increase in cellular immunity and reduction in cellular inflammation can be measured by using a simple formula called Neutrophils – Lymphocytes Ratio (NLR).

NLR is becoming a very popular tool to understand a person's recovery from illness and also it helps in understanding the response of any treatment or therapy. Neutrophils and Lymphocytes are the body's primary defence force against any infection.

Viranorm is a safe, effective and clinically proven ayurvedic medicine, added to the standard care in COVID treatment for better and faster recovery.

Neutrophils-Lymphocytes Ratio (NLR) is becoming an important, inexpensive and very important tool to understand a person's recovery from illness and also about the response to any treatment.

Lower NLR is associated with better recovery without much complications and higher NLR is associated with delayed recovery and developing complications from illness.

Low NLR is associated with high cellular immunity and low inflammation at the cell level. Cellular immunity is important for long term recovery.

NLR can be understood from a very easy and inexpensive blood test known as CBC (Complete Blood Count) to understand about a person's recovery from any illness.

NLR = Neutrophil count ÷ Lymphocyte count

Low NLR	High NLR
Low Neutrophil counts	High Neutrophil counts
High Lymphocyte counts	Low Lymphocyte counts
Faster Recovery	Slow Recovery
Less Complications	More Complications
Low Mortality	High Mortality

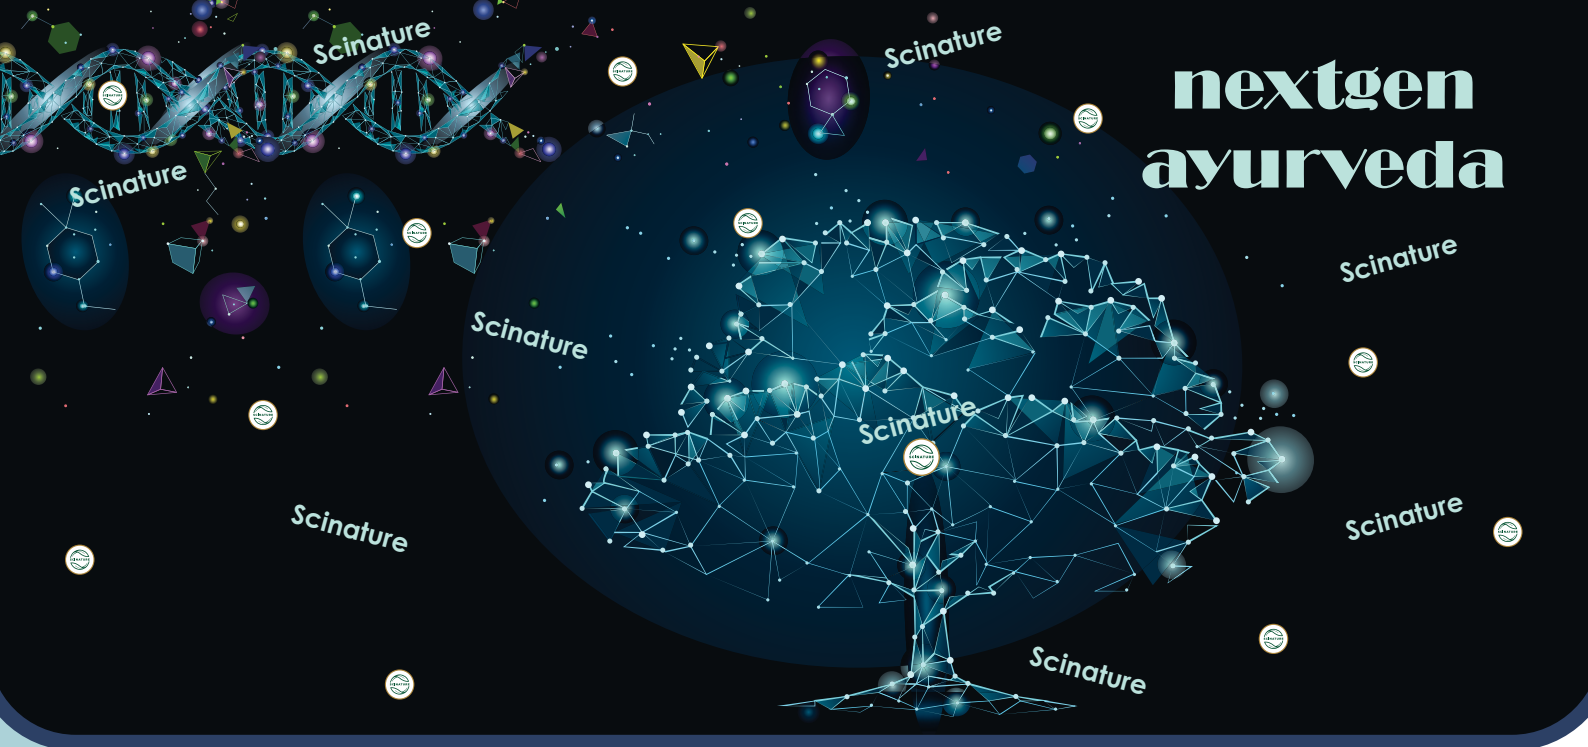

Viranorm is the first ayurvedic medicine to systematically prove through a large clinical trial, that it reduces NLR and helps in faster & better recovery from COVID.

Viranorm successfully completed the highest standard of safety and efficacy studies at Dabur Research Foundation and proved very safe for human beings.
